

ISS – Education & Training

Online Courses

Online courses represent the most cost-effective and adaptable means of providing educating and training for today's professional. Having taught in the online education environment has taught us that the future of education is growing exponentially towards online learning. It's happening in most every academic institution.

What are the benefits?

- Convenience – access your course anytime, almost anywhere (24/7) with web access.
- Enrichment – share questions and feedback in an open forum with your classmates and instructor.
- Cost – less expensive and less additional expenses burden.
- Independence – self-paced, work through the course and study on your own at your comfort level.
- Options – take all or just a few of the available courses.
- Accessibility – the range and reach of web-based learning is extensive.
- Exciting way to learn – student engagement through readily available web-based technology.
- Increased accountability – with the built-in ability to readily track a student's progress through assignments, projects, tests, etc. both the instructor and the student can monitor their progress.
- No more books – well not exactly, but much of the information and reading is already out there and can be referenced as part of the course learning material.
- Course notes – are generally offered in most every course. Yeah- no more note taking.
- Variety – a wide variety of courses are available, not just our Home Inspection Training Program.

Our intention is to work with you collaboratively to ensure your success. For your part, you should allocate a specific number of hours per week to the course (see course syllabus for details). Please use and participate in the “webinars” as an opportunity to ask content related questions. This way, your classmates have an opportunity to answer your question and to share in this knowledge based experience.

Success in an online course depends upon how much and how connected the student feels about the instructor and fellow students. ISS responds to the concern about “lack of face-to-face interaction”; we surpass this concern by incorporating “webinars”, where your instructor and fellow classmates participate in a web-based learning environment through well know media such as Skype and or through FaceTime.

One certain advantage is the final course exam can be readily proctored through our online education and training program by both audio and video conferencing. No need for extra cost or scheduling details.

Online learning trains the participants for the reality of the future of work and communications. Of course you may also simply email your instructor as an option.

At ISS we strive to create learning communities through our courses that are both welcoming as well as being academically challenging.

“E-Learning doesn't just "happen"! It requires careful planning and implementation.” (Anonymous)
